5) 1.

The Registration\_Number should be a primary key. In addition, the "Maximum\_weight", is too vague in terms of information. We cannot know if this includes the weight of the truck or simply the maximum load weight, which can be crucial in practical terms.

2.

Registration\_year, model and maximum\_weight has a functional dependency on Registration\_Number.

3.

Assignment is a foreign key, and Registration\_Number is a primary key.

4.
